Nitrile gloves with  
extended cuff—300mm

Excellent chemical  
and oil resistance

Excellent puncture and  
abrasion resistance—6  
mil thickness

100% nitrile rubber—  
very skin friendly

## High-Five®

### 'HIGH FIVE™' 6MIL HIGH RISK NITRILE GLOVE

PRODUCT CODE: MDNHR6

Heavy duty disposable nitrile gloves with  
300mm extended cuff

Produced in  
a facility  
certified to:  
ISO 9001:2015

CE EN ISO 21420:2020  
EN ISO 374-5:2016

#### PERFORMANCE FEATURES

- + Nitrile gloves with extended cuff—300mm
- + Excellent chemical and oil resistance
- + Excellent puncture and abrasion resistance—6 mil thickness
- + 100% nitrile rubber—very skin friendly
- + Textured non-slip grip, powder free
- + Produced to medical and food processing standards
- + Exceptional comfort, fit and feel
- + Sizes: S-2XL

#### SUITABLE FOR

- + Industrial
- + Engineering
- + Laboratory
- + Automotive
- + Handling fuel, oil, solvent
- + Medical
- + Cleaning
- + Printing
- + Painting

#### CERTIFICATIONS

**EN 455-1** Defines requirements for disposable gloves to check they are free of holes to be safe for medical use

**FDA 21** Overarching regulations for production, testing, labelling and advertising of food and drugs within the United States.

**CFR 177.2600** Rubber articles intended for repeated use—lists permitted elastomers, vulcanization materials, accelerators, retarders, activators, antioxidants, plasticizers, fillers, emulsifiers, and other additives, and sets extraction limits for food contact.

**EN 374-1** Indicates that the product meets permeation standards for protective gloves, with permeation resistance of (Type A) at least 30 minutes to 6 test chemicals, (Type B) at least 30 minutes to 3 chemicals and (Type C) at least 10 minutes to 1 chemical. Letters under the shield identify the chemicals.

**EN 374-4** Measures the glove's resistance to degradation by chemical exposure—any flaking, swelling, disintegration, embrittlement, hardening, softening, etc—by testing the force required to puncture the glove material after continuous contact with a challenge chemical.

**EN 374-5** Tests the glove for safety in risks of contact with micro-organisms—bacteria, fungi and viruses.

**D6978-05** Indicates that the product meets ASTM standards for resistance of medical gloves to permeation by at least 9 chemotherapy drugs. A more stringent and specialised test than the EN374 test.
