

NIGHTSTICK HELMET MOUNTED DUAL-LIGHT™

EL-HML

The EL-HML Helmet-mounted Multi-Function Dual-Light™ Flashlight is the most versatile choice for helmet-mounted hands-free lighting. The 4650 outshines the competition with its powerful 220 lumen tightly-focused Flashlight and a beam distance rating of 183 meters. Located just below the Flashlight is a user-selectable brightness Floodlight. The Floodlight's soft unfocused light pattern is perfect for lighting up nearby objects. Brightness settings for the floodlight give the user the choice of 100 or 50 Lumens, as well as a Survival mode at 15 lumens for emergency situations when having less light that runs for 60+ hours. In Dual-Light mode (both the Flashlight and the Floodlight turned on at the same time), the user can light up the distance and the ground at the same time for maximum versatility and user safety. The 4650 also has a green, rear facing LED light so that others can easily identify team personnel in smoke-filled or dusty environments. The multi-angle adjustment feature allows it to fit on any Fire Helmet (or side-brim hard hat) regardless of whether it has an up-turned or down-turned brim. The user can fine tune the exact position and angle of the light. This feature makes it possible to not only avoid goggles, face shields and other helmet-worn gear, but also place the light exactly where it's needed. The EL-HML is IP-X7 rated water proof and meets the requirement for NFPA-1971-8.6 (2013). Power comes from 2 included CR-123 batteries.

Multi-angle adjustment allows the user to position the light to avoid goggles, face shields and other helmet-worn gear

Designed with firefighters and rescue workers especially in mind

3 flashlight options:
220/100/30 lumen;3
floodlight options:
100/50/15 lumen

Fits on any fire helmet or side brim hard hat

Green rear-facing LED to easily identify team personnel in smoke-filled environments

PERFORMANCE FEATURES

- + Designed with firefighters and rescue workers especially in mind
- + Green rear-facing LED to easily identify team personnel in smoke-filled environments
- + 3 flashlight options: 220/100/30 lumen;3 floodlight options: 100/50/15 lumen
- + Dual-Light™: 175 lumen
- + 15 lumen 'survival mode' has 60+ hours run time

- + Beam Distance: 183m/120m/59m
- + Fits on any fire helmet or side brim hard hat
- + Multi-angle adjustment allows the user to position the light to avoid goggles, face shields and other helmet-worn gear
- + IP-X7 Waterproof
- + Aluminium alloy case material
- + Powered by 2xCR-123 lithium batteries (supplied)
- + Warranty: Limited Lifetime

SUITABLE FOR

- + Emergency services
- + Utility maintenance
- + Tradespeople
- + Airports
- + Security
- + Factory
- + Recovery
- + Hazardous locations
